

### Main Features:

Bidirectional converter RS-104 is intended for RS-232 serial interface signals conversion to serial interface RS-422 signals. And also vice versa.

The device's case is suitable both for wall-mounting, and for DIN-rail mounting.

Also RS-104 provides for connected equipment optical and galvanic isolation.

### Technical Description:

- Supported interfaces: RS-232, RS-422/485
- Maximum baudrate: 57600 bps
- LED's indication: power and interfaces' activity
- Device's interfaces galvanic isolation from the power circuit
- Device's interfaces are optoisolated
- Power voltage: 12..24 VDC
